JSL Band Update

- ◆ The Data Management Coordinator (DMC) team has requested that the JSL CMD Event band be split into two bands to show specific JSL-1 and JSL-2 usage
- ◆ This update helps them manage the JSL uplink/downlink in both planning and execution
- ◆ Two new Event Bands would be created: **JSL-1** and **JSL-2**
 - ◆ JSL CMD band would still exist, but would no longer be used
 - ◆ Historical data in Viewer using JSL CMD remains intact
- ◆ This has been coordinated between DMC and CRONUS, but not the Partners
- ◆ If approved, propose that we begin using the new Event Bands at the start of Increment 49 WLP development
 - ◆ OPTIMIS software will need to be updated to add new bands

★ Forward Work

- ◆ Submit request to DSWG using new attribute form
- ◆ Obtain approval for the new Event bands from DSWG/ExPCP
- ◆ Update OPTIMIS software for the new Event bands
- ◆ Implement new Events in Increment 49/50 activities
